# 智 慧 型 低 壓 電 容 器 / 盤

## 前言 Introduction:

- 1 智慧型低壓電容器係採用電力電子之控制技術與電容器製造技術將其整合於同一組電容器中，使電容器本身就具有控制、量測、保護、信號輸出及液晶顯示等功能；即具低壓無功自動補償功能，使其能夠可靠工作、方便使用零點投切、保護、量測、信號、聯機等功能，是低壓無功因自動補償技術的重大突破。
  - 2 依總容量大小將各段之電容器配置於盤內，並由一只MCCB控制整體之電容器，便於維修切離電源。
  - 3 智慧型電容器可靈活應用於低壓無功補償的各種場合，且突破傳統現有低壓無功自動補償設備的結構模式，具有全自動化性能、使用方便等優點。
- 1 An intelligent low-voltage power capacitor uses the current advanced capacitor manufacturing technology to integrate with sophisticated microcircuit software and hardware control technology for producing a capacitor set that has versatile functions such as controlling, measurement, protection, signal output and LCD display. To be more specific, the integrated capacitor set has a low-voltage reactive-power self-compensating capability to provide such functions as reliable work, easy access to zero-point switching, protection, measurement, signaling and networking. It is a major breakthrough in low-voltage reactive-power self-compensating technology.
  - 2 The capacity panel houses varieties of capacitor sections according to total capacitance, with the whole set of capacitors controlled by one MCCB to facilitate maintenance and power switch-off.
  - 3 The intelligent capacitor set can be flexibly applied to almost all situations requiring low-voltage reactive power. Its breakthrough from the structure of conventional low-voltage reactive-power self-compensating device makes it fully automatic and easy to use.
